POE: ST10249706 Matthew Klette.

Changes Made:

Due to there being no feedback from part 2, as I received 100%, I did not create any necessary changes besides adding the required elements, such as an entirely new statistics screen.

This Screen consists of an add number button, minimum and maximum number button, an average button, as well as a return button which will take the user to the home page of the app once clicked.

The add number button uses an array which only allows the user to enter up to 10 numbers. If no numbers are entered then an error message will be displayed, this is also present on the average and MinMax buttons.

The MinMax and average buttons use the data saved in the array to locate or calculate the highest and lowest value number in the array, as well as the average of all saved numbers that the user has entered.

The only additional change I made that is not necessary for the required instructions is the comments I added on the statistics code page. The code that I used may be confusing to some users, therefor these comments are very useful.
